

Is the cost of running your Air Operated Double Diaphragm Pumps (AODD) running away with itself?

Then **The Pump Company** has the answer

The **Albin Pump AD** series is a revolutionary new concept of air operated diaphragm pumps. The patented design offers advantages for users that result in significant reductions in running costs.

1. Lower energy consumption of up to 48% as confirmed by test at the Royal Technical University in Stockholm, giving savings of over £400 on one pump after 6 months continuous running. (see graph)
2. Lower pulsation of 70% increases diaphragm lifetime by 3-5 times with less downtime and lower costs for maintenance.
3. Total flexibility in installation means that the pump can be installed as an integrated part in the piping, therefore reducing the pipe length and reducing the costs.
